

1. Data jumlah pengualan motor termasuk data diskrit, Alasannya karena data jumlah pengualan motor diperoleh dengan cara data di hitung.

2. 30, 30, 32, 32, 33, 33, 33, 33, 33, 33,
35, 35, 35, 35, 36, 36, 36, 36, 36, 38,
38, 39, 39, 39, 40, 40, 42, 42, 43, 44,
44, 45, 46, 46, 49, 50, 50, 53, 53, 53,
54, 58, 60, 60, 61, 65, 68, 72, 77, 80

* Setelah data diurutkan hitung Range:
data terbesar - data terkecil
 $80 - 30 = 50$

* hitung jumlah kelas:

$$1 + 3,3 \log n$$

$$1 + 3,3 \log 50$$

$$1 + 3,3(1,6989)$$

$$1 + 5,6$$

$$6,6 \sim \text{dibulatkan } 7$$

* hitung panjang interval:

$$\text{Range} / \text{jumlah kelas}$$

$$50 / 7 = 7,14 \sim \text{dibulatkan } 8$$

Table distribusi frekuensi

Pengualan motor	frekuensi
30-37	19
38-45	13
46-53	8
54-61	5
62-69	2
70-77	2
78-85	1

Total

50

3.

7. nilai tengah (x_i)	$F \cdot x_i$	LCL	UCL	LCB	UCB	FK	$x_i - \text{mean}$	$(x_i - \text{mean})^2$
$\frac{1}{2}(30+37)=33,5$	636,5	30	37	29,5	37,5	19	-10,8	116,64
$\frac{1}{2}(38+45)=41,5$	539,5	38	45	37,5	45,5	32	-2,8	7,84
$\frac{1}{2}(46+53)=49,5$	396	46	53	45,5	53,5	40	5,2	27,04
$\frac{1}{2}(54+61)=57,5$	287,5	54	61	53,5	61,5	45	13,2	174,24
$\frac{1}{2}(62+69)=65,5$	131	62	69	61,5	69,5	47	21,2	449,44
$\frac{1}{2}(70+77)=73,5$	147	70	77	69,5	77,5	49	29,2	852,64
$\frac{1}{2}(78+85)=81,5$	81,5	78	85	77,5	85,5	50	37,2	1383,84

7. mean
$$\frac{\sum f \cdot x_i}{\sum n} = \frac{2219}{50} = \underline{\underline{44,3}}$$

$f \cdot (x_i - \text{mean})^2$

2216,16

101,92

216,32

871,2

898,88

1705,28

1383,84

7393,6

b. median

Letak median $\frac{1}{2} \times 50 = 25$

Median terletak pada interval ke-2

$$\text{LCB med} + \left[\frac{\frac{1}{2} N - f_{k \text{ med} - 1}}{f_{\text{med}}} \right] \times I$$

$$37,5 + \left[\frac{25 - 19}{13} \right] \times 8$$

= 41,19

c. varians

$$\frac{f \cdot (x_i - \text{mean})^2}{n} = \frac{7393,6}{50} = \underline{\underline{147,87}}$$

d. standar deviasi

$$\sqrt{147,87}$$

= 12,16

e. jumlah penjualan motor paling sedikit = 30

f. jumlah penjualan motor paling banyak = 80
